GOAL SETTING

ASSIGNMENT

Assignment 1

Abstract

Goal setting is very much important in everyone's life to live. I personally believe in goal settings, plans, and achievements. After each small success, I appreciate myself in certain ways.

1. GOAL FOR THIS SEMESTER

In my first term of this course, I was introduced with python programming language. In that term because of time constraint, I just learnt the basic concepts of python. I did not get a chance to try programming concepts. So, from the first term break I started doing some programming tasks using some websites like HackerRank and I decided that I should learn Python concepts as much as I can in this semester itself. So, I am using my leisure time to do those practices.

PYTHON PROGRAMMING

SPECIFIC
- I will try to **complete all the exercises in the HackerRank** account
- After completing exercises in HackerRank I will try to **do some big projects from Github**

MEASURABLE
- I am trying to complete atleast **all the excercises in one topic in a week**

ACHIEVABLE
- I scheduled to **complete easy and small topic excercises all together in a single week**

REALISTIC
- When I fixed one topic for one week , I **found that I am rushing on weekend without much understanding the concept. So i decided to spend 30 minutes everyday on this practice which helps me to do my practice more understanding.**

TIME - BOUND
- **I targeted to complete my Hacker Rank excersices in 3 months which is on or before march end and I am planning to do one project on april month.**

2.   GOAL FOR PERSONAL DEVELOPMENT

I am a person who always gives priority to personal development and self-grooming. When it comes to personal development, I always have a strong belief in the following proverb

" You must first build the wall, must you not, and then adorn it with figures?". So, it is very much important to everyone to take care of our health more than anything else. But unfortunately, because of my new move into a new country, food habits, and study-life balance I did not focus on my health, which ends up with an overweight and some health issues. So, in this new year, I took the goal that I should concentrate on my health and turn back into a Healthy Lifestyle. When it comes to a healthy lifestyle, I am not intended to lose my weight immediately with some diets, rather than I am trying to change my lifestyle habits as follows.

HEALTHY LIFESTYLE

SPECIFIC
I am trying to avoid foods from outside and

Atleast 30 mins workout eachday

MEASURABLE
I am trying to eat a cup of fruits in the evening which can help me to avoid junk food in the evening time,because in the evening times only I get more cravings.

ACHIEVABLE

In my grocery list I am avoiding the items which are not good for my health, which helps me to avoid easy access to unhealthy eating.

REALISTIC
I am not following any diets in which I need to skip any meal. So I am eating as much as I want but I changed the way of cooking and consuming.
I am eating all my favorite foods with less oil and spices, which is making me feel that I am eating all my foods.

TIME-BOUND

I am measuring my weight once in 10 days and I am making sure that I did not gain weight.

Not gaining extra weight is my short term goal now.

3.   GOAL FOR TERM 4

I know that term 4 is the important part of my course where I can get real-time experience in my field. So, I would like to place in a good company for my co-op and I would like to learn as much as I can. Placing in a good company for a co-op will not happen in a single day. So, I am developing my skills which are related to my work from day 1 of my course.

Steps Towards my Term 4 Goal:

- In my first term I have learned MySQL technology by myself which would have helped me to understand the data structures and data handling and as a part of my course I was introduced to Hadoop technologies which helped me a lot to know about the tools that I am going to use in my workplace.
- In my second term I have planned to complete my Python programming, and, in my class, I am learning all the technologies which are important to become a data analyst.
- In my third term I going to study very important subjects as a part of my course and, I planned to study any data visualization tool in detail which will help me in my work.

Plans In Term 4:

- I will try to explore more in the project which has been assigned to me as a part of a co-op, and I will try to complete the tasks which have been assigned to me.
- I will take my own initiative to mingle with the team to learn about teamwork as well as I will try to do my tasks independently.
- I should learn how to work with deadlines and how to handle stressful situations in the workplace.
- I would like to receive a good performance appreciation from my team lead and project manager.

4. GOAL AFTER CONVOCATION (LONG TERM)

I am very much happy to share that my long-term goal is to become an entrepreneur. Especially I would like to improve women empowerment.

I am having very few years of experience in IT and when I was working in IT as a software developer, I got interested in data. So that only I have chosen this big data analytics course.

After completing this course, I would like to place in any one of the top companies as a data analyst where I can learn so many things and I would like to reach a good position in the field where I am. After several years, I would like to start an IT-related company, where the customer can get the software courses training and services.

Steps Towards my Long-Term Goal:

- I am having some experience in website development. With the help of that experience, I am developing my own company website model for the past few months which I am going to use for my company.

- I am learning some management concepts and courses through websites and some online sources which will help me to do better management.

- I would like to listen to the motivational speech from successful entrepreneurs which always keeps me on the same track.

- I am updating myself in the field of IT and I am trying to do a follow-up about IT on a regular basis to make myself up to date in this field.

- Whenever I am coming across an idea for my business, I am writing down in my diary and I am documenting everything, When I am going to start my company, it might be an old idea or plan, but I hope in some way it will help me. So, I am documenting all my plans.
